Parking Generation

By ITE Technical Council Committee 5-BB

A comprehensive source of parking occupancy rates for land uses and building types, this report is intended to be used by transportation professionals, developers, planning boards and others involved in determining parking demand. Provides three methodologies for determining average parking occupancy of a land use or building type—parking generation rate, a plot of actual parking occupancies versus the size of the independent variable for each study and a regression equation of parking occupancies related to the appropriate independent variable. 2d edition. By ITE Technical Council Committee 5-BB, chaired by S.J. Johnson. ITE, 1987. 185 pages, spiralbound. Publ. No. IR-034A; $85 ($60).
